

## Talk Box User Manual

### How to get started:

1. Navigate to <https://github.com/amaanvania/TalkBox> and download the project
2. Open Builder.java class and run the project

### How to use the software:

1. This is the initial prompt for the Configuration App.

Input a filename and the number of buttons to initialize.

2. This is the main user interface for the configuration application.

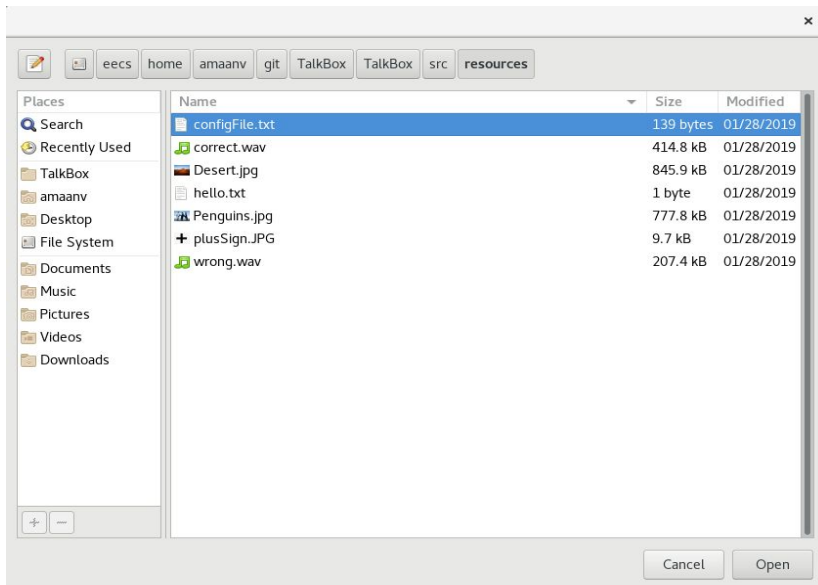

Each picture can be customized by clicking on the Edit Button

3. The prompt for Editing a button:

The user must input a title or name for the button, the path to the audio file and the path to the image

The user can manually enter the image and audiopath or they could click on the "choose" buttons which prompt a filechooser interface

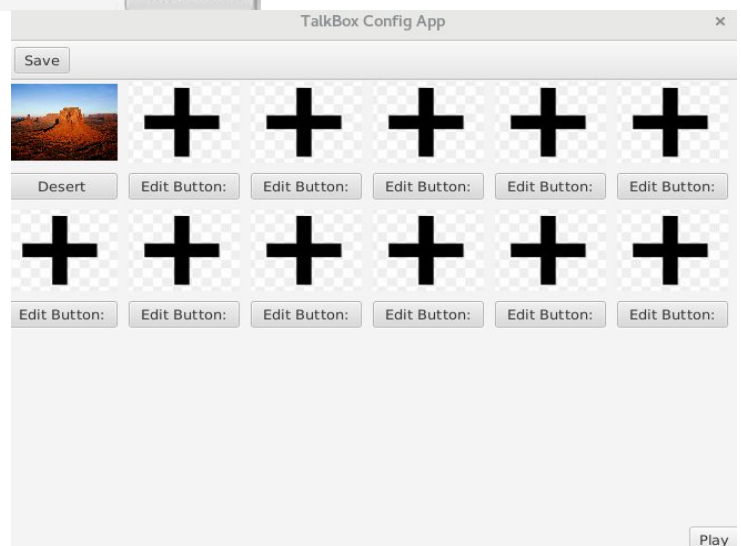

Once the title and paths are chosen, the prompt looks as follows

4. Upon clicking submit, this data is sent to the main configuration app, and the main configuration app updates. An example is shown below

This data can be saved to a local configuration file by clicking the “Save” button in the top left corner. This file can be played by the TalkBox Simulation App by clicking the “Play” button in the bottom right corner.

5. An example of the TalkBox Simulation App for this particular configuration file can be seen as follows
